

Decreases the Risk of Deep Venous Thrombosis (DVT)

VascuComp® DVT Treatment is intended to decrease the risk of deep venous thrombosis (DVT) and pulmonary embolism (PE) by aiding blood flow back to the heart via lower extremity limb compression.

The **VascuComp® 3-DVT** offers a highly effective DVT prophylaxis when used with custom designed ThermoTek Calf or Foot compression garments. The foot garments are designed for rapid compression of the arch of the foot to 100mmHg. The calf garments allow compression of the lower leg to 45mmHg with a compress and hold interval of thirty seconds and a deflate and rest interval of thirty seconds.

*Refer to User Manual for Contraindications.

NOTE: Federal law restricts this device to use by or on the order of a licensed medical practitioner. Follow the prescribed instructions of your medical practitioner for therapy mode, treatment area, duration and frequency of treatment.

INDICATIONS

- Decrease the risk of deep venous thrombosis (DVT)
- Aids blood flow back to the heart
- Treat and assist healing of cutaneous ulceration (wounds)
- Reduce healing time
- Enhance arterial circulation (blood flow)
- Reduce compartmental pressures
- Reduce edema (swelling)
- Reduce the need for anti-coagulant (blood thinning) medications.

AVAILABLE GARMENTS/OPTIONS

- Foot
- Calf
- Single Patient Use Garments
- Travel Bag
- Bed Bracket
